X12938 to X13919 represent these nucleotide sequences, also known as conside. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcus infection in an animal and monitoring progression of disease, and for identifying agents which can be used to another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (HUMA.) Claim 1: Page 1057-1063; 1409pp; English.
The present invention describes a computer readable medium which has
The present invention describes a computer readable medium which has
The present invention describes a computer readable medium which has
CC the nucleotide sequences SEQ ID NO: 1 to 391 (v72134 to V5224) recorded
CC 031 (v52134 to V52524) are genomic fragments from Streptococcocus
CC 0391 (v52134 to V52524) are genomic fragments from Streptococcocus
CC 0391 (v52134 to V52524) are genomic fragments of the S.pneumoniae
CC molecule encoding a homologue of any of the fragments of the S.pneumoniae
CC molecule encoding a homologue of any of the fragments of the S.pneumoniae
CC genome (SEQ ID NO: 1 to 391) where the nucleic acid molecule is produced
CC probe a target sequence defined by any of the sequences in SEQ ID NO: 1
CC to 391, identifying members of the library which contain sequences
CC that hybridise to the target sequence and isolating the nucleic acid
CM calcules from the members; or (b) isolating mRNA, DNA or CDNA produced
CC from an organism, amplifying nucleic acid molecules whose nuclectide
CC fragment of the S. pneumoniae genome to prime the amplification and
CC isolating the amplified sequences. The computer readable medium can be
CC sequence of commercial importance, or expression modulating
CC invention can be used in diagnosis kits and assays, and pharmaceutical
CC compositions and vaccines for S. pneumoniae
CC compositions and vaccines for S. pneumoniae.
CC promoter of SCO CC SCO CC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31-0CT-1997; U19588.

This sequence encodes Streptococcus pneumoniae proteins of unknown functions. The invention provides DNA sequences (V65201 to V65304) from functions. The invention provides DNA sequences (V65201 to V65304) from functions. The invention provides DNA sequences (W80605 to W80728). A recombinant host containing a vector comprising any of the above nucleic acids can be used for the recombinant expression of the protein sequences. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these DNA sequences. The DNA chip can be used methods for evaluating gene expression in S. pneumoniae and for identifying virulence genes in peptide fragments can be used to treat S. pneumoniae infection. The antibodies can also be used to cheat S. pneumoniae infection. The antibodies can also be used to detect S. pneumoniae cells. Sequence 5816 BP; 1640 A; 1190 C; 1424 G; 1562 T;
                                                                                   - used in DNA chips
                                                                                                          for evaluating gene expression, and identification of virulence

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the nucleotide sequences SEQ ID No:1 to 391 (V52134 to V52524) recorded to SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The nucleotide sequences depicted in SEQ ID No: 1 to 391. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae molecule encoding a homologue of any of the fragments of the S. pneumoniae of parameters and somprishing a screening a genomic DNA ilbrary using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences to 391, identifying members of the library which contain sequences in SEQ ID NO:1 to 391, identifying members; or (b) isolating menor contain sequences in computer the members; or (b) isolating menor contain sequence of from an organism, amplifying nucleic acid molecules whose nucleotide contains the amplification primers derived from the conputer based system for identifying fragments of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer based system for identifying fragments of the S. pneumoniae genome. Products from the present of invention can be used in diagnosis kits and assays, and pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                     Streptococcus pneumoniae genome fragment SEQ ID NO:236.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1: Page 1642-1643; 2084pp; English.
A computer readable medium has been developed which has recorded on it
A computer readable medium has been developed which has recorded on it
S02 nucleotide sequences isolated from the Enterococcus faecalis genome.
X12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences. Also known as contigs. The computer-based system
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcal infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (HUMA-) HUMAN GENOME SCI INC.
Barash SC, Dillon PJ, Kunsch CA;
WPI; 99-045171/04.
WPW isolated Entercoccus faecalis polynucleotides and polypeptides
- used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19-WAR-1999 (first entry)

```
24-JUL-1998 (first entry)

Nucleotide sequence of the E3 fragment encoding the PhaG protein.

E3 fragment; Pseudomonas putida KT2440; polyhydroxyalkanoic acid; PHA;

pha G gene; fatty acid biosynthesis; PHA production; rhlA gene product;

P aeruginosa PG201; qin gene; breakage; ester bond; complementation; ss.

Pseudomonas putida.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1,504

CR 72440 pha (polyhydroxyalkanoic acid) G gene locus. The sequence contains three open reading frames (ORFS) ORFS and ORFS are localised only thrompletely on this fragment, with ORF1 and ORFS are localised only completely on this fragment, with ORF1 acking the 5'region, and ORF3 lacking the 3'region. ORF2 encodes PhaG. The PhaG protein is incompletely on this fragment, with ORF1 acking the 5'region, and order on the linkage between fatty acid blosynthesis and PhA production when P putida is grown on a simple carbohydrate source such as gluconate. The PhaG protein shows a 44% overall identity to the rible grown when P putida is grown on a simple carbohydrate source such as gluconate. The PhaG protein shows a 44% overall identity to the rible and PhaG show high homology to a qin gene region of P. aeruginosa, which encodes a quinchose sensitivity protein. Pha also has a region which shows homology to a group of enzymes, most of which are hydrolases active on esters such as lipids. PhaG may therefore be involved in thr breaking of ester bonds. The phaG may therefore be involved in thr breaking of ester bonds. The phaG may therefore be involved in thr breaking of ester bonds. The phaG may therefore be involved in the phaG plants chosen from sophean, canola, rape seed, sunflower, flax and peanut and Arabidopsis, which can then be harvested. Synthesis of PHA from and Arabidopsis, which can then be harvested. Synthesis of PHA from a contact of the pages of the phaG pages of the pha

Claim 1: Page 833-839; 3271pp; English.

Cof the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM, Homology searches using the protein-encoding or regulatory regions of commercial, therapeutic or that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against Saureus infection. The be used in a vaccine composition against Saureus infection of compositions, food poisoning, osteomyelitis, solutions as a sample. Saureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, syddrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5852 AACAAACATGTTTCTAAAAATATGAAGTTATTTCAGCAAATCCTATCAC 5803

Liberthon 1; Page 1979-1980; 2084pp; English.

A computer readable medium has been developed which has recorded on it a computer readable medium has been developed which has recorded on it 820 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences. Also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences (HUMA-) HUMAN GENOME SCI INC.

of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can the computer readable medium.

Sequence 676 BP; 163 A; 136 C; 77 G; 236 T;
                                                                                                 ant1-S.aureus vaccines
Claim 1; Page 1505-1506; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences
     Staphylococcus aureus
in the production of
Polynucleotide(s) and proteins derived from stored on computer readable medium and used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-MAY-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  preumoniae

Interpretation describes a computer readable medium which has

The present invention describes a computer readable medium which has

The present invention describes a computer readable medium which has

the nuclectide sequences SEQ ID NO:1 to 391 (v52134 to v52524) recorded

on it, or a representative fragment or a sequence at least 95% identical

to 580 ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1

to 391 (v52134 to v52524) are genomic fragments from Steptococcus

premoniae. The present invention also describes an isolated nucleic acid

molecule encoding a homologue of any of the fragments of the S.pneumoniae

comparising: a homologue of any of the fragments of the S.pneumoniae

comparising: a screening a genomic DNA ilbrary using as a process comprising: (a) screening a genomic DNA ilbrary using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1

comparising members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules whose nucleotide sequences from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers desired from the sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the computating the amplification of importance, or expression modulating for the sequences or expression of the computer contains the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.

The present invention describes a computer readable medium which has a sequence sequences SEO ID NO: 1 to 391 (V52134 to V52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEO ID NO: 1 to 391. The nucleotide sequences depicted in SEO ID NO: 1 to 391 (V52134 to V52524) are genomic fragments from Streeptococcus pneumoniae. The present invention of any of the fragments of the S. pneumoniae molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEO ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEO ID NO: 1 to 391, identifying members of the library which contain sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus pneumoniae genome fragment SEQ ID NO:375.

DNA encoding a Staphylococcus aureus protein of unknown function.

Staphylococcus aureus protein; ribozyme; antisense sequence; control;

Staphylococcal gene; regulatory element; bacterial gene expression;

vaccine; Staphylococcal infection; food poisoning; scaled skin syndrome;

toxic shock syndrome; ss.

Staphylococcus aureus.

This sequence encodes a Streptococcus pneumoniae protein of unknown this sequence encodes a Streptococcus pneumoniae protein of unknown the streptococcus pneumoniae genome and corresponding pactein sequences (V65201 to V65304) from the Streptococcus pneumoniae genome and corresponding pactein sequences: (W80605 to W80728). A recombinant host containing a vector comprising any coff the above nucleic acids can be used for the recombinant expression of the protein sequences. The invention also provides a DNA chip having arrayed on it at least 15 base pair fragment of any one or more of these carrayed on it at least 15 base pair fragment of any one or more of these expression in S. pneumoniae and for identifying virulence genes in S. pneumoniae. Antibodies that selectively bind to the above proteins or peptide fragments can be used to treat S. pneumoniae calls.

Sequence 3071 BP; 886 A; 588 C; 668 G; 929 T;
                                                                                                          DNA encoding a S. pneumoniae protein of unknown function. Streptococcus pneumoniae protein; recombinant; gene expression; DNA chip; virulence; antibody; infection; detection; treatment;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcus pneumoniae nucleic acid sequences - used in DNA cl
for evaluating gene expression, and identification of virulence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1055 TCTTGAATAAACCCTATGGAGTGGCTTCTATTCCTAGTGTTAATCACTCT 1104

                       The present sequence encodes a Staphylococcus aureus protein of unknown function. The present sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of ribozymes and antisense sequence to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies with antibacterial action. These vaccines and antibodies with antibacterial action. These vaccines and antibodies with antibacterial action. She was an antibodies with antibacterial action. She was a notations relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock syndrome.
                                                                                                                                                                                                                                                                                     nseq
                                                                                                                                                                                                                                                                            Novel polypeptide(s) from Staphylococcus aureus strain WCUH29 to isolate antimicrobial compounds, and in vaccines against S.

Stash SC, Choi GH, Dillon PJ, Dougherty BA, Fannon M, SCh CA, Rosen CA:	WPI: 98-27225/24. Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays. Pharmaceutical compositions and vaccines for Streptococcus	pneumoniae Claim 1: Page 183-194: 1409pp; English. The present invention describes a computer readable medium which has the nucleatide sequence SPO IN NO.1 to 301 (VSC)334 to VSC)531 recorded	it, or a representative fragment or a sequence at 1. SEQ ID NO: 1 to 391. The nucleotide sequences depicts 391 (V52134 to V52524) are genomic fragments from S.	umoniae. The present invention also describes an issecule encoding a homologue of any of the fragments

genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a to probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences frat hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced from an organism, amplifying nucleic acid molecules whose nuclectide sequence is homologous to amplification primers derived from the isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the s. pneumoniae genome. Products from the present fragments of the S. pneumoniae genome. Products from the present fragments of the S. pneumoniae genome. Products from the present compositions and vaccines for S. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           st;
by Matthew Clark (Lehrach lab; ICRF, London and Max Planck Institut fuer Molekulare Genetik, Berlin). cDNAs for EST analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq_documentation_block:

on rice as their primary source of carbohydrate.

Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumqanathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, Makes it suitable for genomic studies. In order to facilitate positional clouds, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety using EcoRI as the clouing enzyme. The library contains 55,296 clones with an average insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9%. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /clone_lib="CuGI Rice BAC Library (ECORI)"

                                                                                                                                                                                                                                               /note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NGI_CGAP_Lub; was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento Soares and M. Fatima Bonaldo.
